

BDT TPF-550 LONG SHEET DEEP PILE FEEDERS

Increase productivity

Enable new applications

Now you can print sheets up to 14 x 51 inches (356 mm x 1.295 meters) on KODAK Digital Sheetfed Presses, with a Long Sheet Deep Pile Feeder from BDT Print Media. With larger sheets, you'll be able to meet diverse market needs, including:

- 6-page letter/A4 brochures
- 8-page letter/A4 brochures
- Oversized brochures
- Retail signage
- Dust jackets for larger books
- Panoramic posters and point of sale
- Pocket folders
- Other special applications

A long sheet pile feeder also enables more impositions per sheet, significantly boosting productivity. Printing 3-up or 4-up letter/A4 jobs on a long sheet actually increases print rates on KODAK NEXPRESS and KODAK NEXFINITY Digital Presses by about 10%:

- 140 ppm increases to 152 ppm
- 120 ppm increases to 131 ppm
- 100 ppm increases to 109 ppm
- 83 ppm increases to 91 ppm

Simple, reliable and affordable automation

Available in two models, TPF-550 Long Sheet Deep Pile Feeders offer stable and reliable performance across the widest media range in the industry, with fast media changes that can help you reduce lost production time and increase profits. They incorporate patented BDT Tornado technology for media separation, lift and transport without requiring any manual adjustments.

With no compressors or valves, TPF-550 feeders operate quietly, and gap control helps ensure high sheet delivery accuracy. Modular architecture helps keep service costs low.

Maximum flexibility

TPF-550 Long Sheet Deep Pile Feeders support the same range of long sheet sizes as KODAK NEXPRESS and KODAK NEXFINITY Digital Presses, with all substrate drawers remaining operational. Sheets from press drawers can be inserted in the job stream along with sheets fed from the pile feeder, bringing the total number of substrate types that can be fed into a single job up to five.
